

## Dual-line tyre inflation system RDS/portal for New Holland forage harvesters with manufacturer's approval

### Advantages of the dual-line technology

- Maintenance-free rotary unions without grease fitting, fully integrated into the machine axle cover.
- High operational reliability due to switchable tyre valves with anti-kickback attachment, no pressure loss if line comes off.
- Continuous adjustment of the tyre pressure with RDS/control.
- Short inflation times due to factory installed air compressor.
- Maximum traction and soil protection in the field due to larger footprint.
- Longer harvesting periods in difficult conditions.
- No need for dual wheels or crawler track.
- Safe driving on the road and directional stability at high transport speed.
